This product is formulated from a blend of selectively adapted non-pathogenic bacteria for accelerated degradation of organic compounds such as grease, food, beverages, urine, blood, vomit and pet stains. Even though these organisms are non-pathogenic, they can cause infection when in contact with open wounds. They are, however, susceptible to many commonly used antibiotics.

Application: Read Safety Data Sheet Carefully Before Use. It is normal for dormant bacteria to settle in the container; therefore, mix container well before use. Dilution ratios vary according to the severity of the task. Product contains chemicals which may stain or discolor fabrics and various surfaces. Always spot test an inconspicuous area, especially for sensitive surfaces. Use only if there are no negative effects. Always remove as much gross soil as possible before using this product. Do not use other chemicals with or after this product.

Drains/Sinks: Use 1-2 oz. at the end of each day for each drain. Add 2 cups warm water to chase the product into the pipe.

Restrooms: Use daily or as needed. Use as is or cut with water up to 1:5. Wet bowl and urinal areas thoroughly and pour a few ounces into each and all drains.

Floors: Dilute 1-10 oz. per gallon of mop water or as needed. Overuse or improper use may create slippery contact surfaces and will require rinsing or additional wiping. Prohibit traffic while floors are wet. Ensure floors are not slippery once dry.

Grease Traps: At the end of each day, use 1-2 oz. for every 5 Gallon trap capacity. Add 1 Gallon warm water to chase the product into the trap.

Carpets/Upholstery: This product will consume and eliminate the residual organics which cause the stains and odors from deep within the carpet pile, padding and hard surface below. Product may be used straight for prespotting purposes or diluted with water up to 1:10 for general odor control. Dampen carpet and spray onto the affected area. Work the chemical into the stained area using a clean white brush. Allow 5 to 10 minutes during which time the carpet must stay wet. Spray additional water if moisture is lost during the reaction time. Optimum temperature range is 55-100°F. Vacuum, rinse with a neutral cleaner or wash with the appropriate shampoo and equipment.
